

Ecosystem Restoration in Thailand

Program description

This environmental project focuses on maintaining the diversity of ecosystems. Through scientific field studies and the implementation of concrete measures, the actors of this project aim to create synergies between the different natural environments: mangroves, coral reefs, tropical forests...in order to maintain the balance of nature and promote its development in a sustainable way.

During this program you will be supervised by experts to promote the learning of techniques on the one hand and a reconnection with nature on the other.

Your missions

You'll participate in activities across 6 core themes:

- Research and conservation
- Tropical forest restoration
- Conservation of marine flora
- Mangrove restoration
- Coral reef restoration
- Waste Management

Highlights

- Contribute to the fight against global warming
- Take part in raising awareness among local communities about ecosystem protection
- Supervision and experienced guides

Our partner

This international environmental internship aims to reconnect humans with their natural environment.

This association works to cultivate respect for biodiversity, and to offer an unconventional, collective and secure learning space to transmit their passion for biodiversity to local and international students. They are strongly committed to the protection of animals and the safeguarding of endangered species in this tourist area of Thailand, which are vulnerable and weakened by the human footprint and global warming. Their method: to intervene directly in the field in collaboration with local associations and authorities.

Meals

We offer a selection of healthy, mostly vegetarian options for breakfast and lunch. Snacks will also be available when possible. For dinner, volunteers can order in advance during the day or plan to eat in town at one of Aonang's many restaurants, or cook on site as we open our communal kitchen in the evening.

Accommodation

Volunteers will be accommodated in shared bungalows with a private bathroom and a balcony overlooking the mountains. The bungalows are equipped with mosquito nets and fans. Common areas and your bungalows will have free Wi-Fi.
